

Marko Mutić

Full Stack Engineer / Frontend Engineer

Serbia – jthorn29@protonmail.com – [linkedin.com/in/marko-mutic](https://www.linkedin.com/in/marko-mutic) – [thorn29.github.io](https://github.com/thorn29)

Senior Full-Stack Engineer with 8+ years of experience architecting and scaling cloud-native SaaS platforms and high-traffic e-commerce apps for millions of users. Proven track record driving business outcomes, optimizing web performance (40% LCP reduction), and deploying production-ready AI capabilities. Technical leader adept at steering cross-functional alignment and modernizing Next.js/Node.js architectures.

TECHNICAL SKILLS

Frontend: React, Next.js, Redux, TypeScript, JavaScript (ES6+), TailwindCSS, Core Web Vitals

Backend & API: Node.js, Express, RESTful APIs, GraphQL, Socket.IO, WebSockets, Microservices

Data & Cloud: PostgreSQL, MongoDB, AWS, Cloud-Native Infrastructure, Database Design, SQL

WORK EXPERIENCE

Senior Full Stack Engineer

August 2025 – Present

TN-Tech

Worked for Optibus Ltd. on a cloud-native SaaS platform powering transit planning and operations in 7,000+ cities worldwide.

- Engineered a driver-based work package traceability model within cloud-native SaaS infrastructure, eliminating cross-team data silos and delivering real-time, audit-ready data visualizations
- Optimized platform concurrency and logic by deploying a granular mutation-logging engine, reducing system errors by 20% and decreasing customer support ticket resolution times
- Spearheaded the deployment of a custom AI Assistant capability, leveraging context-aware vector retrieval to automate complex user workflows and boost daily feature engagement by 10%
- Developed a complex constraint-modeling feature for travel times between duties, allowing planners to dynamically calculate transit windows and ensure 100% schedule feasibility for workforce operations

Frontend Engineer

July 2022 – August 2025

Nortik Software Solutions

Worked for FIGS, a high-traffic DTC healthcare e-commerce platform with 2.5+ million active customers and ~4-6 million visitors per month.

- Streamlined the purchasing funnel by refactoring the ordering architecture and integrating preview mode for Role-Based Access Control, slashing order placement processing time up to 70%
- Supported the globalization initiative, working in a 5-developer team to architect a localized frontend framework for international language and location support, causing a 30% expansion in international traffic
- Maximized application performance by migrating data-fetching to cursor-based GraphQL pagination, yielding a 40% reduction in Largest Contentful Paint (LCP), while also achieving full WCAG compliance.
- Advised the CTO (for a different client) on technology roadmap strategies, mapping out and executing a full-scale legacy migration to modern frontend frameworks and helped build and integrate a custom AI Assistant.

Full Stack Engineer

February 2018 – June 2022

Freelance

Delivered end-to-end full-stack web applications for a diverse portfolio of clients (e-commerce, local businesses, service providers), translating business requirements into production-ready solutions..

- Standardized frontend architecture by designing a modular component library in React/Redux, cutting initial development cycles by 40% across 4 consecutive client product launches.
- Architected and scaled secure backend infrastructures using Node.js, Express, and both SQL/NoSQL databases, successfully delivering production-ready REST and GraphQL APIs for a diverse client portfolio
- Implemented secure, real-time bi-directional communication channels using WebSockets (Socket.IO), incorporating robust JWT authentication layers and schema-validation to ensure data integrity.
